InOvate Introduces DryerFlex® & DryerClamp Combo: Flexible Dryer Duct Now Ships with Two DryerClamps® for Ease of Installation

February 14, 2025 (Jupiter, FL) – InOvate®, manufacturer of the industry-trusted Dryerbox® and DryerWallVent®, has announced that the DryerFlex® flexible dryer transition duct will now be sold with **two DryerClamp® 100% stainless steel worm drive clamps included in every package.**

Previously offered as separate components, the DryerFlex and DryerClamp are now paired to streamline purchasing, reduce jobsite friction, and ensure installers have the proper fastening solution on hand at the point of installation.

DryerFlex is engineered to provide a safer, more efficient transition between the dryer and wall connection, minimizing airflow restriction while reducing the risk of crushed or kinked ducting, which is one of the most common contributors to extended dry times and lint accumulation. By bundling two DryerClamps with every DryerFlex, InOvate removes a common installation variable that can compromise system performance when improper fasteners are used.

The DryerClamp is purpose-built for dryer exhaust connections, with angled multi-driver heads and perfectly sized worm band, all made from stainless steel, delivering a noticeably smoother operation than typical zinc coated clamps. Their extended screw provides ample space for hex head drivers and makes power drill operation effortless.

The combo package maintains full compatibility with standard 4-inch dryer exhaust connections and integrates seamlessly with InOvate's broader exhaust system solutions.
