New InOvate Roof Vent Takes Clothes Dryer Exhaust to New Heights

(Jupiter, FL) – InOvate, the creator of premium residential construction venting products, has taken roof venting to new heights with the introduction of a re-engineered roof termination. The company focuses on safety and exhaust performance improvements for clothes dryers with product solutions that solve common venting problems. An impassioned commitment to detail and product quality has helped bring new innovations to market, including products that are advanced in their simplicity and performance.

Introducing Model 477

The new DryerJack® Model 477 enjoys the same commitment to quality as the entire family of InOvate products. Its design maximizes dryer exhaust system efficiency and safety. Model 477 is deep-draw manufactured of Galvalume® steel for durability and is available in three powder-coated colors. This vent termination meets or exceeds the demanding needs of venting a dryer and is *the* code compliant choice. The deep draw process also delivers a seamless hood providing extra protection against the elements as well as a sleek look for improving home aesthetics.

“As with all InOvate product development, the team started by listening to customers and working to engineer advanced solutions to best meet their needs, delivering superior quality and performance,” according to Cliff Budnick, InOvate’s President. “Lab and field testing have proven the 477 to be perfect for properly venting clothes dryers through the roof.”

Code and Manufacturer Requirements

International building code forbids the use of screens, requires a damper and a venting passageway larger than 12.5 inches for dryer exhaust systems. The DryerJack exceeds all manufacturer and building code requirements without any modifications. It is ready to go right out of the box.

Performance

Superior airflow efficiency is achieved with a large clean opening and lighter Galvalume® curved damper. This, combined with rear placement of the vent passageway that increases in size, allows the dryer to operate at peak performance, maximizing airflow efficiency and helping reduce the chance of dangerous dryer fires. The larger opening also provides easy cleaning and maintenance access while blowing lint straight out, not down.

Prior to this announcement, new DryerJack model 477 production was put into high gear so it will be readily available to your favorite supplier for stocking, which means your next project will shine right away. Visit DryerJack.com or call InOvate today at 888-443-7937 for details and to find the best supply source.

Selecting the DryerJack with its serious performance advantages is a strong sign of a commitment to quality construction. It is a good example of professional expertise that helps strengthen homeowner enthusiasm. The DryerJack showcases the exceptional value in the construction, re-roofing, or upgrade of a home.

InOvate Dryer Products delivers quality, high-performance products covering the entire exhaust system for construction and home service professionals focused on creating safer, more secure homes for their customers. A suite of five solution-based products—all made in the USA—includes the Dryerbox®, the Dryer-ElI®, the DryerJack®, the DryerPlacard™, and the DryerWallVent®.
